

# RDC TX-Pack

The ultimate stand-alone panic pack

NEW

TX Pack with Contact ID

- The TX-Pack is used to send panic signals from alarm installations to a central control room.
- **Ideal for simple installations** - it's an all in one panic alarm system.
- **Monitors trigger cable** (optional on TX 690C).
- **Ideal for installations** where the transmitter is mounted far from the control panel and needs to be **powered independently**.
- **Ideal for** estate agents at show houses, old age homes, panic for guards, cash points etc.
- **Quick and simple to install.**

## Packed with power features!

The unit is self-powered thanks to its own internal battery, transformer and power supply. The TX-Pack is a rugged, proven product already popular in Africa where power outages occur frequently.

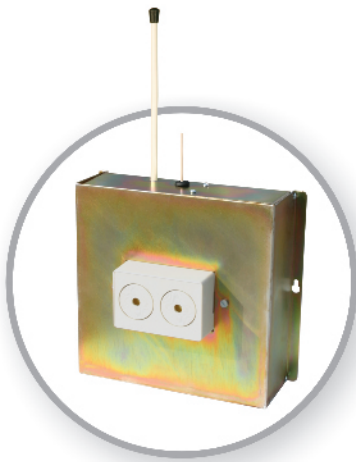

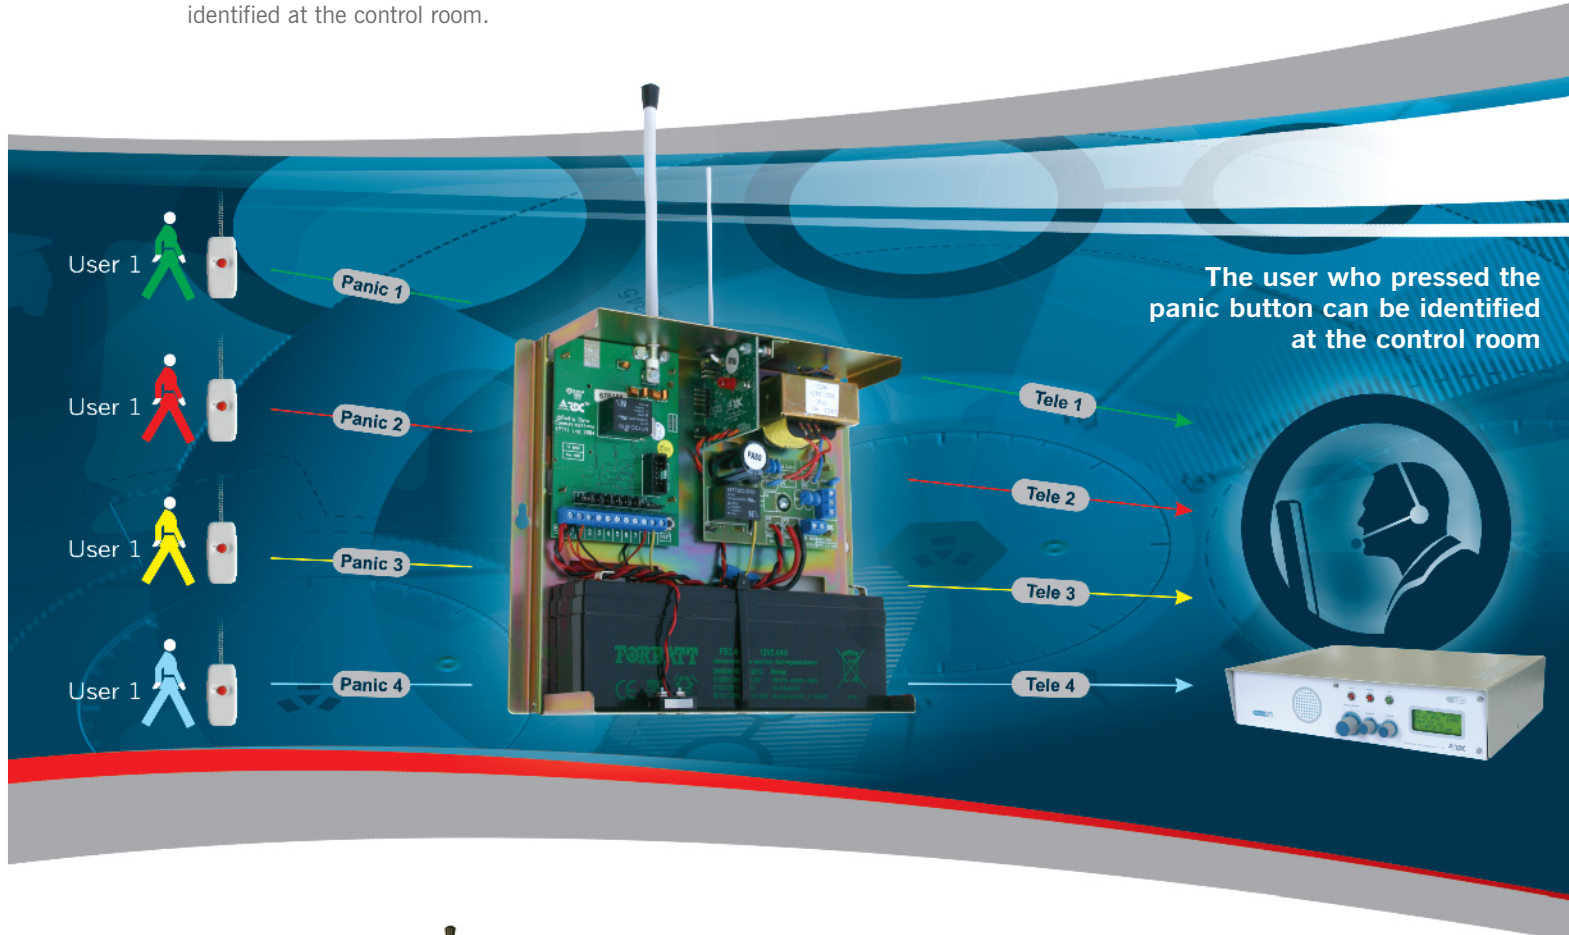

- **Low current consumption.** Draws only 35 mA in standby mode and 1,5 A in transmit mode.
- **Super-long battery life.** Operates for about 50 hours without a recharge; this includes at least 12 transmissions.
- **Efficient, rapid recharging.** Charges battery in only 6–8 hours
- **Rugged, export model transformer.** Designed to cope in harsh conditions where there is an unstable electricity supply.
- **Battery low shut off.** A low battery sensing circuit will automatically disconnect the battery from the unit to prevent battery damage during long power failures.

## ► New enhancements

### Multi channel receiver

A New multi channel receiver option on RDC's TX Packs allows up to 4 different remotes that triggered a TX Pack to be identified. A four-channel receiver allows it to learn up to four different remotes and switch its' outputs depending on which of the four remote signals has been received. This allows the remote that caused the activation to be identified at the control room.

The new feature is ideal for identifying which guard has sent a panic signal as well as many other applications. An old age home for instance could install a simple system and identify which person pressed their panic button and who is in distress.

### Optional External Siren

The built-in siren gives a short 3 second response to the user that their panic signal has been received. The siren is supplied separately and is easily fitted into a cutout in a specially designed lid for the TX-Pack.
